EXPERIENCE

Dec 2023 - Dec 2024

Unreal Engine 5 Developer

Jerome Interactive

Playable prototypes across PC, VR and multiplayer. Complete gameplay systems: combat, movement and interaction, plus co-op and PvP, UI (HUD, menus, settings), save and progression, and game-ready C++ frameworks built from design documents.

UE5

C++

Multiplayer

Jan 2023 - Nov 2023

Unreal Engine 5 Developer

Skylight Forge Entertainment

Gameplay systems including UI integration, inventory and quest logic. Built Blueprint frameworks for fast iteration, implemented save/load and progression, and supported small teams with the technical side of design features.

UE5

Blueprint

UI

Jul 2022 - Dec 2022

Unreal Engine 5 Gameplay Developer

NovaForge Interactive

Modular gameplay systems in Blueprint: player movement, interaction and combat prototypes, with reusable architecture shared across several internal projects, and optimisation passes on complex Blueprint logic.

UE5

Blueprint

Systems

Oct 2021 - Jul 2022

Game Designer

Luthor Dynamic Studio

Worked on the VR title Fates Call, focused on level design and player experience: VR level layout, gameplay flow, progression and interaction design, and iteration for comfort and immersion.

Profile

Unreal Engine developer working across gameplay systems and the technical side of a project: Blueprint and C++, multiplayer, UI, plus the profiling and optimisation that keeps it running. Three titles shipped on Steam, and used to owning a system from spec through to hand-off.

Selected projects

- **Wildlife Warfare (2024):** Asymmetric multiplayer PvP where you pick a side: ten wild animals with their own abilities, or human hunters with weapons. Online or against bots. In Early Access on Steam.
- **ATurd - Abuser Escape (2022):** A third-person search-and-escape game built at VR-EXODUS. You hunt through a house for evidence while avoiding the person who lives there.
- **Fates Call: A New Beginning (2021 - 2022):** A VR-only action RPG with sword, bow and magic. I joined at Luthor Dynamic Studio for level design, and for rendering and optimisation on Oculus hardware.

Mar 2018 - Sep 2023

Unreal Engine Developer

VR-EXODUS

Designed and developed game projects from concept to implementation in Unreal Engine 4 and 5: gameplay programming in Blueprint, core systems, UI and player experience, multiplayer mechanics, prototyping, and performance work.

EDUCATION & TRAINING

2018 - ongoing

Self-taught, on shipped projects

Unreal Engine 4 & 5

No formal games programme. I learned Unreal by building in it, prototypes first, then three titles that went out on Steam. I filled the gaps from the documentation, the engine source, profiling sessions and the people I worked with. Mentored by the developer behind VR Exodus.
